

Lab Owner in New Hampshire Reveals Excelon EZ System is Perfect for A Small Business and Easy for Anyone to Use

Adam and Denise Howard own Darien Eyewear in Keene New Hampshire, a suburban area that has been home to their retail eyewear business for 12 years. Denise Howard reveals how great Coburn's Excelon EZ finishing system has worked for their needs. "We saw the Excelon EZ at a trade show in New York and loved it. We looked at other machines, but they were really expensive. The low price was huge for us and we were pleased it had a three year service plan. We do progressives, bifocals, polycarbonate and even glass—everything but drill mount frames, and the machine works great." says Howard.

Not only does the Excelon EZ perform well for the Howards, it is easy for them to use. Howard explains, "We learned how to use it in a couple hours. My husband even taught our 18 year old son and his friend to use it and it was easy."

The Excelon EZ is a great choice for small businesses like Darien Eyewear. It is a cost-effective, compact system that integrates edging, blocking and tracing for ease of use. The one-body combined tracer and blocker provides the functions a small business needs in a smaller and more convenient footprint. The Excelon EZ edger combined with the EZ tracer/blocker reduces unprofitable steps and delivers high quality lenses to the market at the lowest cost of ownership.

Discover the easy, compact solutions the Excelon EZ finishing system provides and find out where you can purchase these machines and other digital products for your lab by contacting Coburn Technologies at 800-843-1479 or visiting www.coburntechnologies.com
